PAGINE TECNICHE_TECHNICAL PAGES

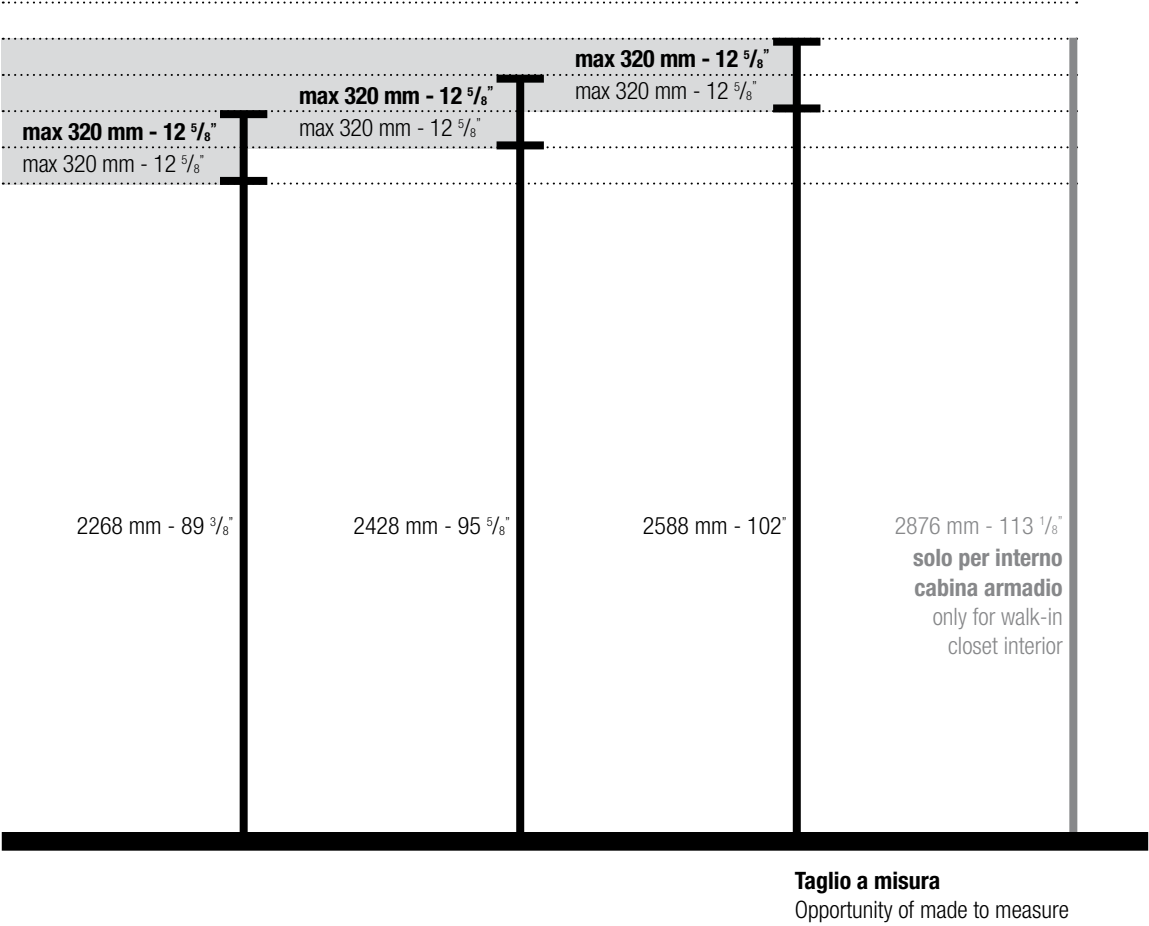

L'elemento innovativo, che modifica uso e percezione del tradizionale sistema di contenimento, è l'anta rototraslante di grande dimensione. Mutuata dal linguaggio architettonico contemporaneo che vede nella porta una superficie a tutt'altezza che scompare nella parete che la ospita e che, quando è aperta, è in grado di creare comunicazioni ampie e continue tra gli spazi, l'anta di Backstage permette di "entrare" nell'armadio rendendolo completamente accessibile, fino ad assimilarlo ad una cabina armadio. Concepita in tre larghezze (cm 72,5, cm 85, cm 97,5) l'anta si apre con un movimento che la fa parzialmente rientrare e offre sia l'eleganza delle dimensioni importanti, sia la possibilità di essere collocata anche in spazi non eccessivamente profondi. Lo spazio interno trova nuove ripartizioni in funzione del meccanismo rientrante, con uno sfruttamento e una razionalizzazione dell'intera area con ripiani, barre porta abiti, cassetiera (sul cui piano è possibile collocare vaschette vuotateasche) e griglia portacamicie. Si aggiungono le

attrezzature posizionate sull'anta: vasche portatutto, specchio orientabile, portacinture e portagioielli. Le finiture in legno, pelle e metallo e i dettagli definiscono Backstage come un prodotto raffinato, riservato a una clientela esigente che apprezza l'alta qualità. Le ante sono previste in legno sucupira, oppure laccate in 16 colori con finitura semilucida effetto gommalacca oppure satinata. L'interno vanta ripiani e vaschette in pelle, cassettiere verniciate nickel bronzo, superfici della struttura in pelle melaminizzata color tortora e color coloniale o sucupira melaminizzato. Un dettaglio importante è rappresentato dalle maniglie, collocate sulla facciata in modo da combaciare tra loro. Due le varianti tra cui scegliere, l'una sporgente, l'altra rientrante, entrambe con inserti in pelle (testa di moro o coloniale) o nickel bronzo. Due le profondità del sistema: cm 66 e cm 85. Nel caso si voglia ottenere una soluzione su misura, una serie di adeguamenti rendono il prodotto sartoriale.

The innovative element that changes the use and perception of the traditional wardrobe system is the large sized "re-entering" door. Changed into the language of contemporary architecture, which sees the door as a full height surface that disappears into the wall where it is mounted and that, when opened, is able to create a wide passageway providing continuous access between two different areas. The door of Backstage wardrobe allows the customer to "enter" into the wardrobe and make it completely accessible, up to point of absorbing it into a walk-in wardrobe. Conceived in three widths (cm 72,5, cm 85, cm 97,5), the door opens with a movement that causes it to partially re-enter the wardrobe, and offers the elegance of large sized furniture, and also the possibility of being placed in spaces that are not excessively deep. The internal space is divided in new ways, due to the re-entering mechanism. It makes it possible to use the space effectively and rethink the entire area with shelves, clothes racks, chest of drawers (with the top surface used to hold

accessory trays) and a shirt compartment grid. Additional accessories can be positioned on the door: accessory trays, adjustable mirror, belt holder and jewelry holder. Wood finishes, leather and metal, and specific details define Backstage as a refined product, reserved for an exclusive clientele who appreciates high quality. The doors are available in sucupira wood or lacquered in 16 colours with shellac finish or satin finish. The interior has shelves and trays in leather, chests of drawers with bronze nickel painted finish, surfaces of the frame in melamine coated leather (in a dove or colonial color) or melamine coated sucupira wood. The handles are important details, mounted on the front in matching positions. Two variations are available: one overhanging and the other re-entering. Both have leather inserts (dark brown or colonial) or bronze nickel painted. There are two depths of the system: 66 cm and 85 cm. If a customised solution is desired, the system is flexible enough to offer tailor-made solutions.
